

Access Control

Application

Provide the ability to network access control systems in high security facilities.

Application Requirements

1. Ability to send "real time" serial data from an access controller over a network
2. Access to an existing Ethernet infrastructure
3. Ability to update and download data & information from a central server

Solution

1. **STE-501C:** Easily connect biometric readers at each access control location with Antaira's serial to Ethernet device server for real time data transmission.
2. **LNX-500A:** Access an existing network with Antaira's industrial unmanaged Ethernet switch for seamless data transfers.
