

### Application

Communicate with multiple CNC machines on a factory floor

### Application Requirements

1. Ability to seamlessly and reliably transmit data across the factory floor
2. Quick and flexible expansion, if necessary

### Solution

1. **STE-501C, STE-601C and STW-601C:** Provides serial to Ethernet solutions for hardwiring or wirelessly connecting different CNC machines with serial devices to the network.
2. **APN-310N:** Industrial wireless AP/bridge/client provides a cost effective wireless connectivity solution for data transmission with the STW-601C
3. **LNX-500A:** Industrial unmanaged switch provides multiple Ethernet port connectivity for any Ethernet based equipment to the network
