

## Remote Diagnostic Monitoring Systems

### Application

Integrate patient data from medical equipment with the clinical information system

### Application Requirements

1. Update patient data quickly and accurately
2. Securely transmit and access data from anywhere such as nurses' stations, labs, pharmacies, doctors' offices, etc.

### Solution

1. **STE-510C / 520C:** Industrial serial device servers allow medical equipment results to be transmitted and accessed securely over the Internet
  - Eliminates manual data entry that can be prone to errors and increases staff productivity.
  - Real-time data transfer makes diagnosis faster and more efficient.
